

RENTAL & VALET OPERATIONS CONTROL

Comprehensive Platform Architecture & Admin Portal Documentation

Generated: September 22, 2026 • Version 2.4.0

The Rental & Valet Admin Portal is an enterprise-grade control center engineered for managing on-demand driver dispatches, vendor/corporate valet bookings, subscription passes, driver payouts, user savings wallets, dispute moderations, and role-based access control (RBAC).

2.1 Valet Bookings & Event Operations

- Event Status Workflow: Standardized across Pending, In Progress, Completed, and Cancelled states.
- Staff Allocation: Real-time assignment modal for allocating active, verified valet personnel to events.
- Action Panel: Standardized action column width (170px) with single-line whitespace preservation.

2.2 Driver Management & Subscription Passes

- Active Driver Roster: Real-time driver status tracking (Online, On Trip, Standby, Suspended).
- Pass Verification: Subscription validation enforcing daily/monthly pass compliance prior to trip dispatch.

2.3 Financial Settlements & Driver Payouts

- Payout Ledger: Tracks Gross Revenue, Platform Commission, Deductions, and Net Disbursed Payouts.
- Integrated DataTable: Replaced legacy tables with global Paginated & Searchable DataTables.

2.4 User Savings & Digital Wallets

- Dual View Navigation: Seamless tabbed switching between User Wallets and Immutable Wallet Ledger.
- Transaction Auditing: Comprehensive audit trail for cashbacks, top-ups, and promo campaign rewards.

2.5 System Administration & RBAC

- Roles & Permissions: Granular permission toggles for User Management, Financials, and Support.
- Header Integration: Centralized page titles mapped dynamically across all 24 sub-routing components.

To maintain high visual polish and executive readability across all 24 administrative modules, the interface adheres to strict visual design guidelines:

- Metric Stat Typography: Standardized across all 8 primary overview views to text-xl font-bold.
- Harmonized Palette: Stat labels use uppercase tracking (text-[10.5px] font-bold text-slate-500) paired with contextual color accents (Emerald, Amber, Sky, Rose).
- Single Unified Cards: Consolidated scattered metric widgets into unified responsive grid headers with vertical dividers.
